

Car Sales application

Instructions :

The homepage is the main page where the program starts running .

By running the homepage we could select

1.Login (for existing user or admin)

2.Sigup (for new user)

- Signup

Enter the Four details Name,email,password and Contact appropriately for making a proper registration.

After this we would move to login page.

- Login

Enter the email and password appropriately which is registered while signup.

Then we would move on to Car sales page .

CarSales page

- Enter all the car details no textfield should be empty.
- Then we can click on Save button .

Save Button adds up the car into the database and the car list.

- Then Reset button can be clicked to reset the textfield.

Enter id text field is there to get contact of the car owner for which we have to enter the car's id from the list.

Then click on Contact which would simply display a appropriate message.

Then there is Search button which would head us to Search page.

Edit and Update (for admin only)

So for edit and update option one needs to login from admin account as mentioned in the demo video also.

Edit button has a textfield in front where we would enter the respective car id of the car whose details need to be edited .

- So enter the car id and click on edit then all the data of the respective car would be displayed on the textfields where we can edit the fields.
- After this we just need to click Update which would update the data in the car list and database respectively.

Search page(After clicking on search button) :

Here we need to enter the 4 attributes like model,car name (manufacturing company),price,distance travelled.

Then after filling all details and clicking on search button it would show a message searching results .

If a car with such details exist we get the appropriate result on the search list.

Back button:It redirects you to the CarSales page back.

*****End*****
